abstract

汉语是声调语言 (tone language), 所以汉语发音非常难学。外国学生学单词的词汇声调遇到不少困难。此外, 声调在语流中发生多方面的变化, 因为声调和重音、语调、语言风格 (style of speech)、语速 (speech tempo) 等要素相互作用, 关系非常复杂。本文分析汉语发音教学的难点、包括声母 (initials)、韵母 (finals)、声调 (tones)、重音 (stress), 轻音 (non-stress)、音渡 (junctures)、句调 (sentence intonation)。最后介绍音块 (phonetic chunks) 的概念。

Chinese is a tone language. Its pronunciation is rather difficult to acquire. The author explores specific problems related to teaching / learning Chinese pronunciation. The following topics are addressed: Hanyu Pinyin latinization; Chinese syllable structure; pronunciation of difficult initials; the finals and their classification, pronunciation of difficult finals; four tones (the third tone in particular); stress and non-stress; relationship between tone and stress; junctures and their role in speech perception; the important role of unstressed Chinese function words and their features; rhythm of connected speech; sentence intonation. Finally the concept of “phonetic chunks” is introduced.
